- 150 characteristics for use

**100% Italian Made  
Products**

100% Made in Italy

**Social responsibility**

Our manufacturing is carried out exclusively by individuals protected under EU employment law. All of our products are strictly made

according to specific legislation in force on safety and the prevention of accidents.

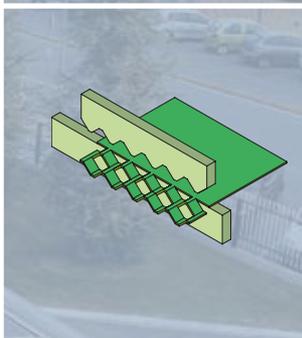

## ENVIRONMENTALLY-FRIENDLY

FILS IS COMMITTED TO GREEN ISSUES NOT ONLY IN ITS INTENTIONS OR STATEMENTS BUT ALSO IN ITS ACTIONS AND USES MATERIALS AND PRODUCTION PROCESSES THAT ARE MINDFUL OF THE ENVIRONMENTAL IMPACT.

### Green energy

95% of the energy required for production comes from photovoltaic systems.

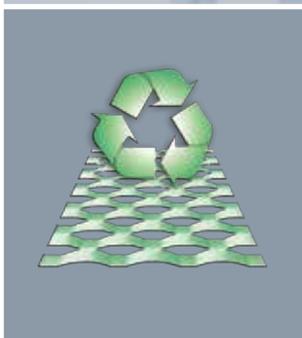

### Pollution-free process

“Expanding” is a cold-pressing process that does not require the use of pollutants

### Zero-scrap processing

Expanded metal is produced without any work scrap with the optimized use of raw materials

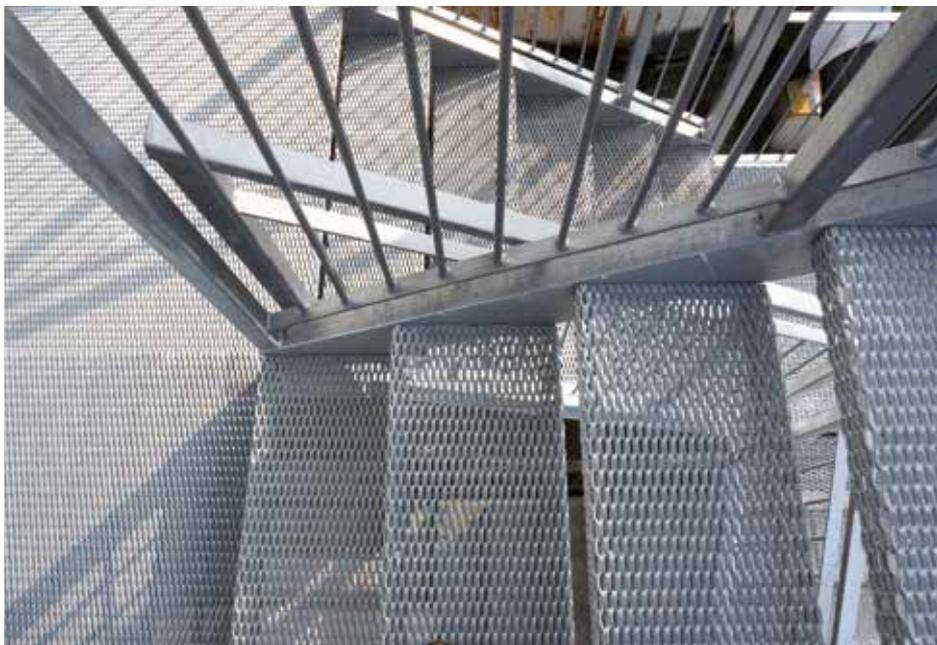

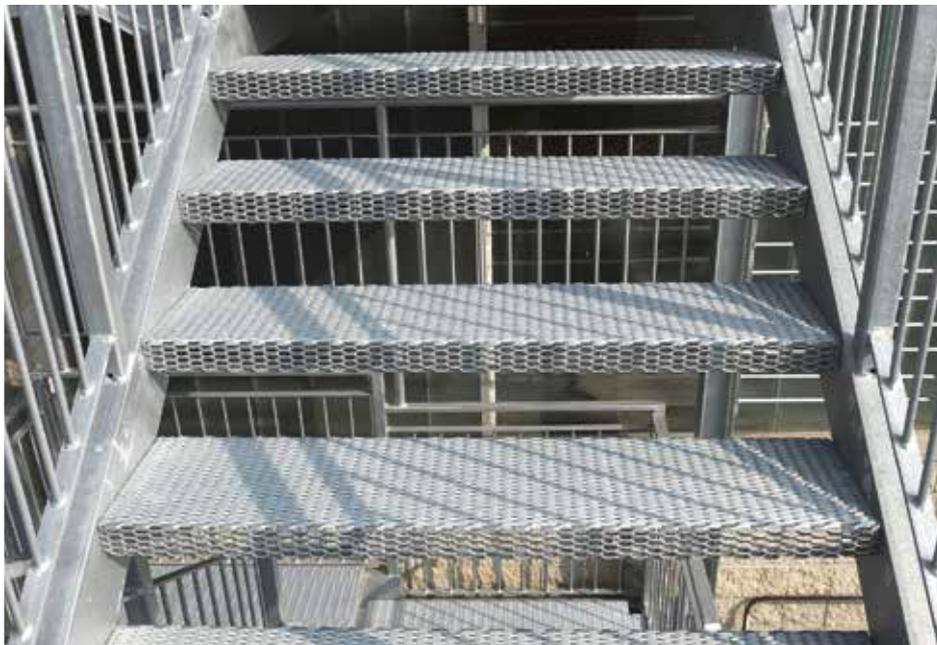

### Recyclable

At the end of its life cycle, expanded metal is 100% recycled, according to waste collection rules

### The power of innovation

Using the finest raw materials, Fils produces the highest quality gratings and expanded metal, turning them into industry, construction and architecture solutions.

With continuous innovation, Fils guarantees the company and designers satisfaction all over the world.

**Stair treads for getting around safely**

Non-slip - anti-panic - anti-heel - anti-ice.

Fils walkways allow you to walk without slipping, under wet or dry conditions, even in oily industrial environments. Fils products comply with legal regulations, are certified in terms of load capacity and are certified for skid resistance in accordance with current legislation.

**Fencing to protect spaces and privacy**

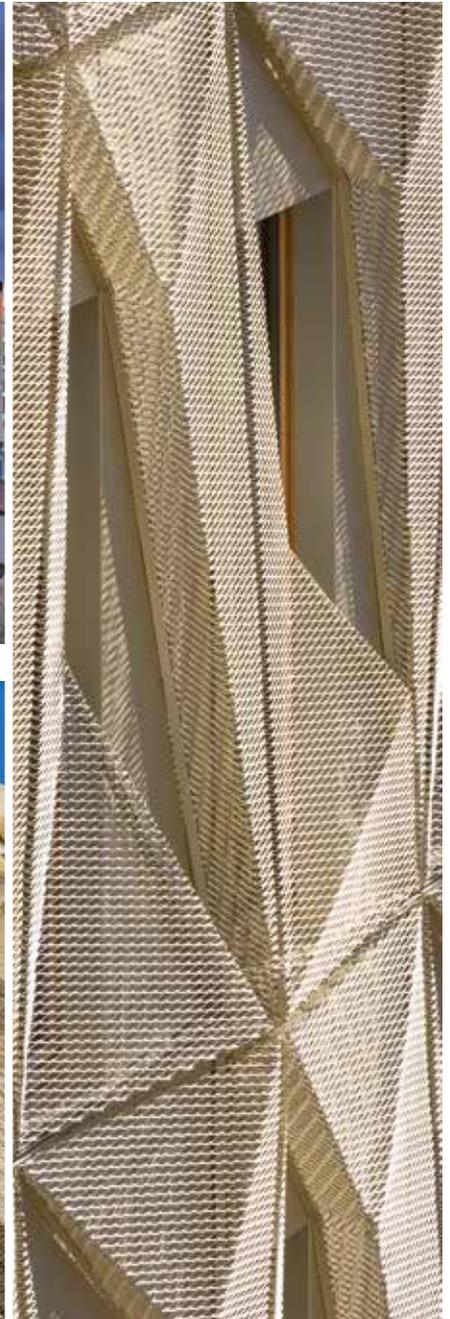

Cordon off hazards and prevent risks. Protect the privacy of your premises.

Our fencing and parapets are the ideal solution and can be configured to meet diverse needs in terms of privacy. Robust materials guarantee the utmost comfort in various context.

**Modular cladding and metal façades**  
Contemporary modular surfaces.

For façades or interior design, expanded metal cladding panels lend themselves to numerous patterns, whether horizontally or vertically. The choice of mesh and juxtaposition provides many possible creative designs.

**Maximum scope for personalisation**

Customised services to achieve the desired effect, both in terms of aesthetics and functionality.

The design meets many of today's demands: transparency, light weight and airiness, as well as protection from sunlight. The designer needs materials that are both simple and durable such as expanded metal, which enables maximum flexibility in the choice of dimensions and shapes.

**Smart shading**

The energy of natural light and the comfort of shade.

The expanded metal 'fin' sunshades screen and filter sunlight; they adjust almost organically to provide the utmost comfort to your guests. Mobility of the screening elements has become a component of paramount importance in terms of building performance.

**Protective and aesthetic finishes**

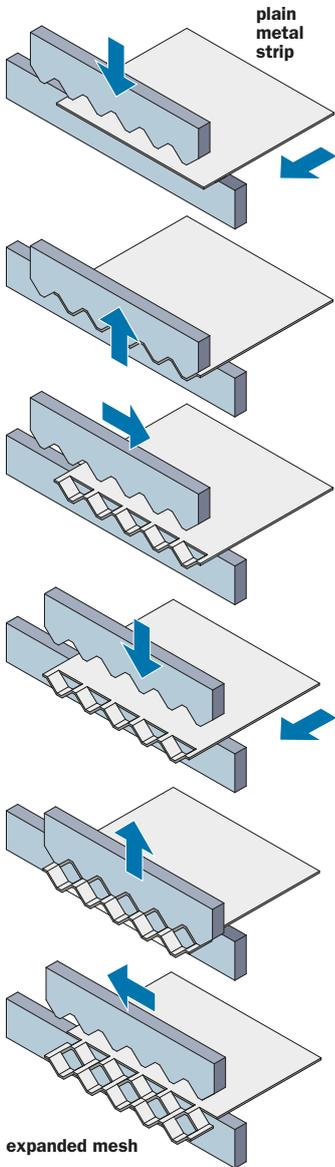

A range of colour finishes for a premium result and durability.

Selecting a high-quality professional surface finish not only affects the aesthetic appearance, but also makes sure that the materials used are long-lasting. Anodising and painting allow the broadest choice of colour hues for the intended use of the project.

**FILS 21 GRATING - NON-SLIP**  
**Certified to standard DIN 51130**

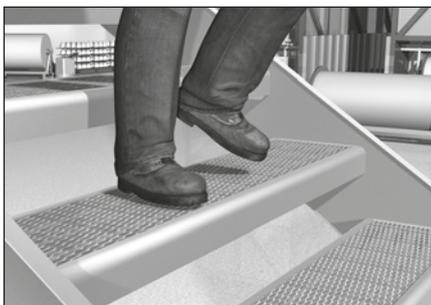

**The non-slip features of the Fils 21**

For worksites with a high risk of slipping, **FILS** certified **non-slip gratings** guarantee an **improved safety and greater stability**.

Lower risks of slips or falls, both on horizontal surfaces and slopes.

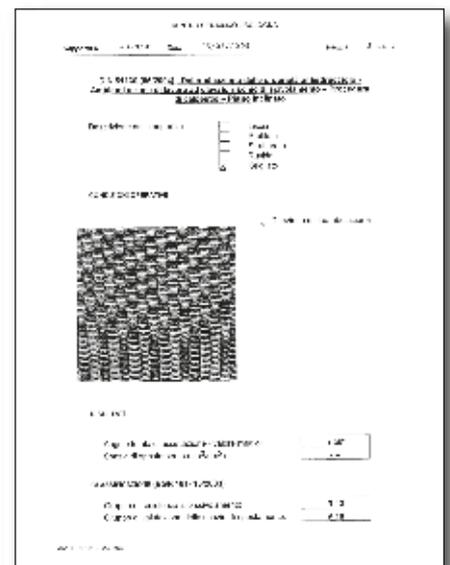

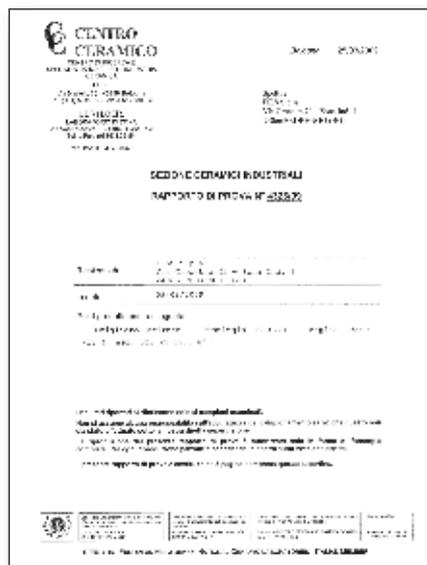

The design of the mesh gives the following characteristics: anti-panic, heel-safe, anti-ice.

**Slip resistance backed by test reports**

The test for DIN 51130 classification was developed by an internationally recognised laboratory, **the Centro**

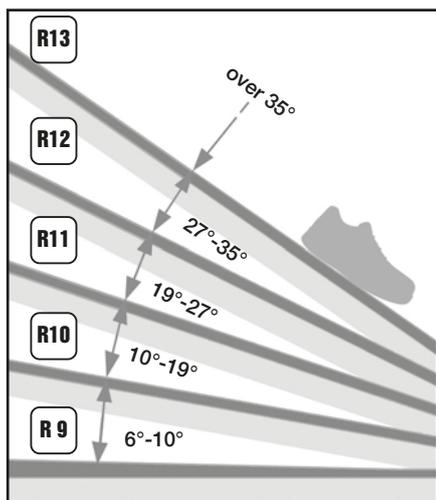

**Ceramico Bologna**, which is able to award quality standards for numerous scientific centres and laboratories.

**CLASSIFICATION (BGR 181 - 10/2003)**

Group of anti - slip properties: **R13**  
 Movement area evaluation group: **V10**

## DIN 51130 classification

Angle of inclination

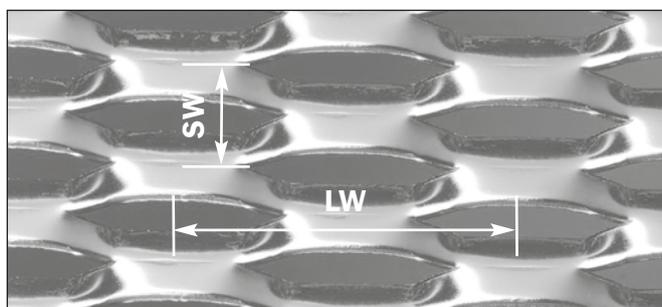

| Angle of inclination used in the test | DIN 51130 classification | Type of friction in the tests on the sloping plane |
|---------------------------------------|--------------------------|--|
| $6^\circ \leq \alpha \leq 10^\circ$   | R 9                      | Minimum coefficient of friction                    |
| $10^\circ < \alpha \leq 19^\circ$     | R 10                     | Normal coefficient of friction                     |
| $19^\circ < \alpha \leq 27^\circ$     | R 11                     | Coefficient of friction higher than the norm       |
| $27^\circ < \alpha \leq 35^\circ$     | R 12                     | High coefficient of friction                       |
| $\alpha > 35^\circ$                   | R 13                     | Very high coefficient of friction                  |

**WITH REFERENCE TO THE DIN 51130 CLASSIFICATION, FILS 21 EXPANDED METAL ACHIEVED THE FOLLOWING RESULTS:**

**R13** Lengthwise light entrance

**R13** Lengthwise opposite the light entrance

## **Certifications and functional characteristics of stairs treads and landings**

### **Certified load capacity**

All Fils stair treads and landings are certified according to the current standard (NTC 2018 - Ministerial Decree dated 17/01/2018), which defines the distributed and concentrated loads to guarantee maximum safety.

### **Non-slip**

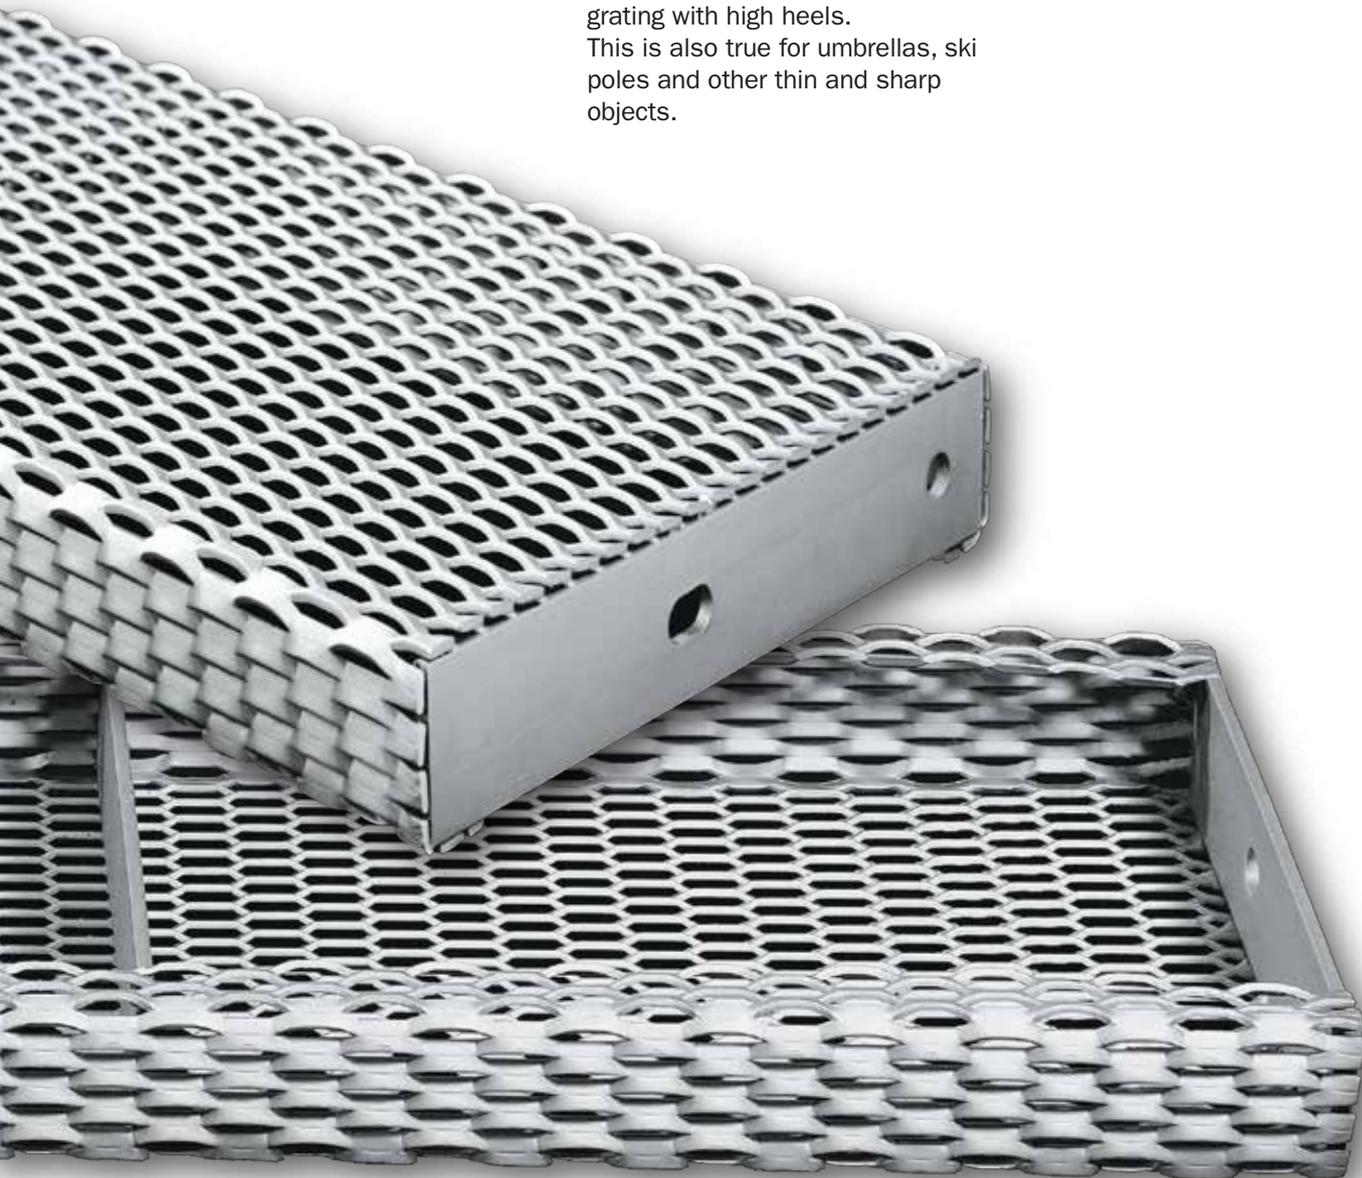

Thanks to their excellent slip-resistant characteristics, risks of slipping or falls can be prevented. The non-slip coefficients are defined by Standard DIN 51130. (From page 42)

### **Anti-panic**

The expanded mesh grid with its characteristics shape limits the view of the void below and avoids the sense of “vertigo” that might affect the person looking down.

### **Heel-saving**

The shape of the mesh prevents the risk of falling and being stuck in the grating with high heels. This is also true for umbrellas, ski poles and other thin and sharp objects.

## NEW GRIGLIOFILS STAIR TREADS AND LANDINGS

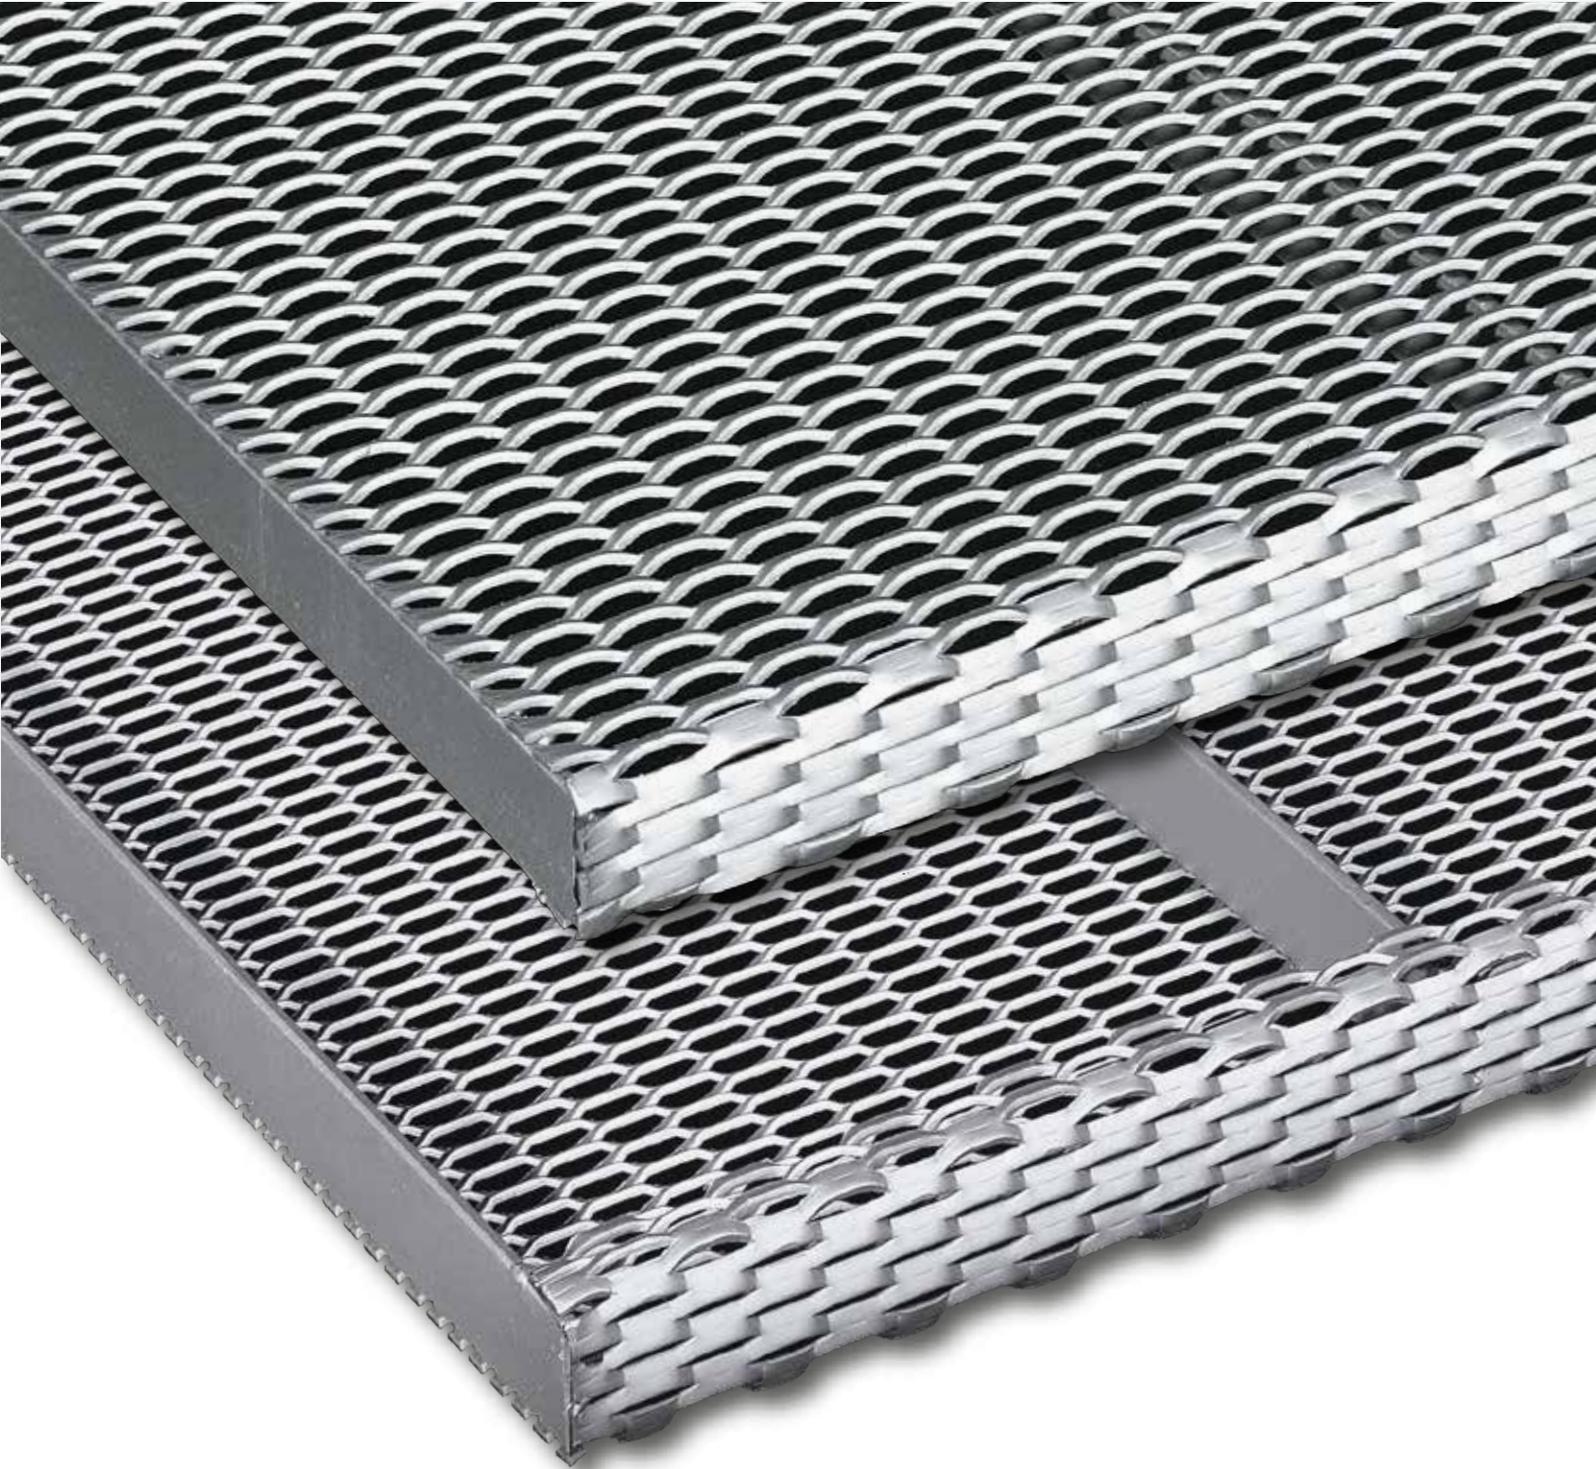

### **FILS innovation.**

The new stair treads and landings are made with an optimised construction method.

They are manufactured from a single expanded mesh element,

which is folded and stiffened with supporting cross-bars.

The side plates have holes and slots, enabling them to be fixed easily.

# NOTES RELATED TO THE VERIFICATION OF LOAD CAPACITY OF STAIR TREADS AND LANDINGS

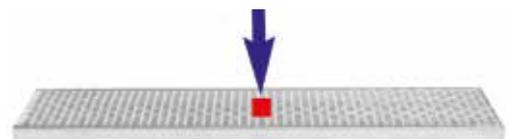

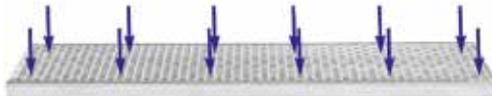

The text of Ministerial Decree dated 17/01/2018 (NTC 2018) states that the load conditions evenly distributed are necessary but not sufficient - it is always necessary to verify the concentrated load with the relevant and suitable footprint. Therefore, it is important to verify:

- the unit of measurement of certified loads
- loads the footprint measurement used to verify the concentrated load

### DISTRIBUTED VERTICAL LOADS (EVENLY DISTRIBUTED) RELATING TO STAIRS

### CONCENTRATED VERTICAL LOADS (ON A FOOTPRINT 50x50 mm) RELATING TO STAIRS

## PRODUCT USE INFORMATION

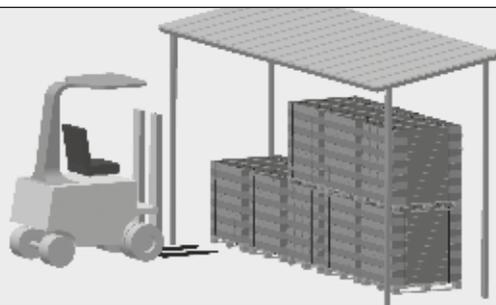

**Instructions for transport, storage, fixing and products as usage according to the Consolidated Act on Construction**

1

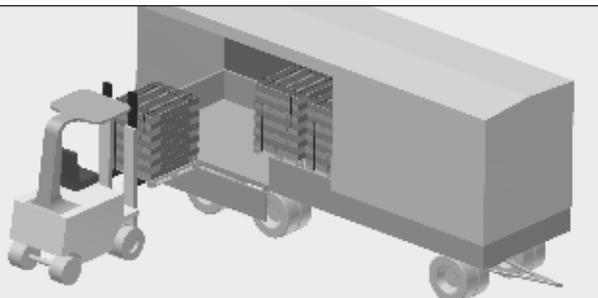

To make transport operations more efficient, we use single pallet storage layer by layer. Each pallet is strapped to ensure safety during loading and unloading processes.

2

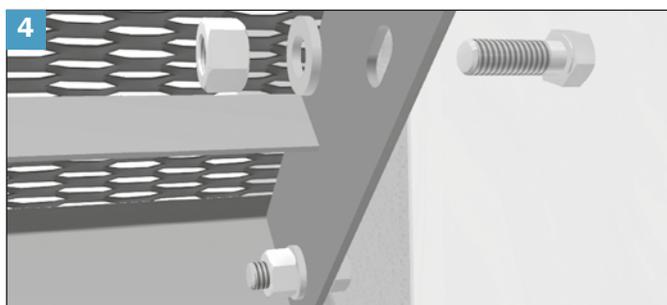

Up to a maximum of two pallets can be stacked for storage in a protected location.

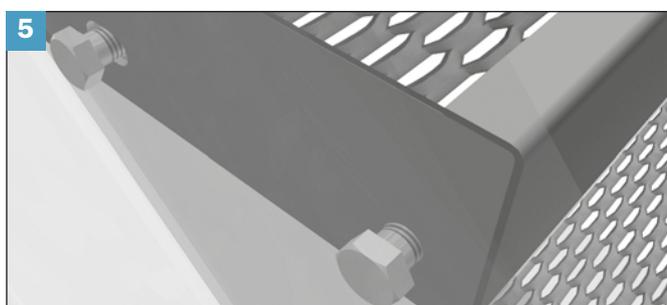

3

Is highly recommended to use a fork lift to handle correctly the stored products.

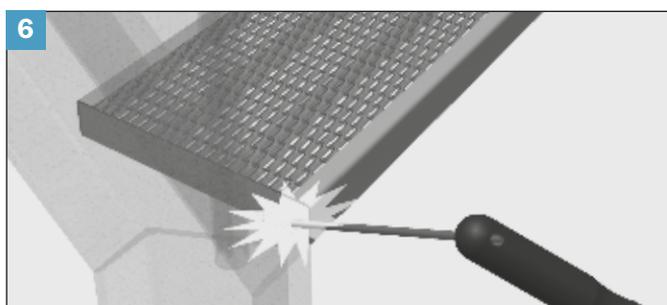

The Beta, Eco, Gamma, Sicurfiles and Superfiles steps are fitted by inserting them into the respective risers with anti-tamper attachment, obtained through bolting into the hole and slot provided to allow for the necessary flexibility in placement.

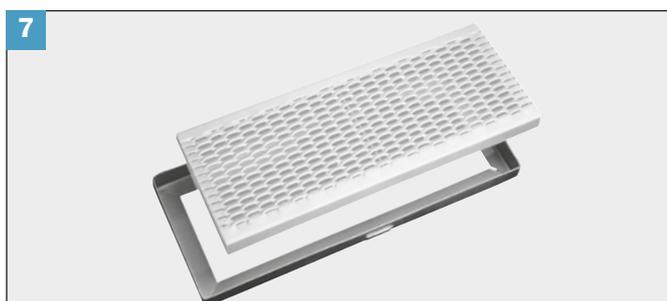

The relevant landings are placed in the appropriate positions.

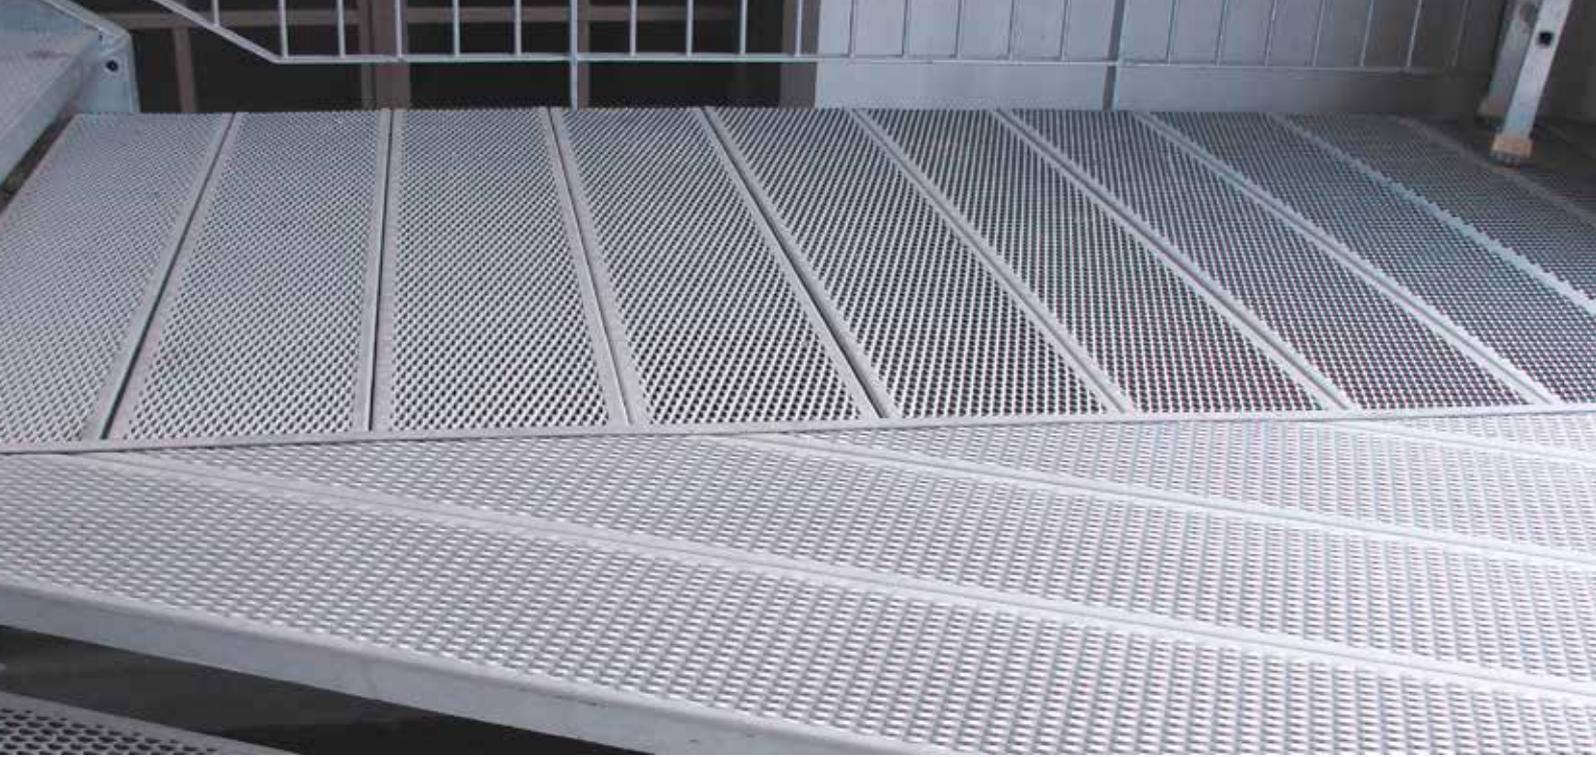

Bolt and nut M10 x 25 mm underhead (in hot-dip galvanised carbon steel or in AISI 304)

The **INDUSTRIA** step is fitted by soldering, as indicated on pages 79-81, according to in-house specification ST 117 Guidance on soldering specifications.

Upon request, the grates, manhole covers, and pedestrian manhole covers are housed in the appropriate location with the support frame.

## GRILLES WITH SUPPORT FRAMES

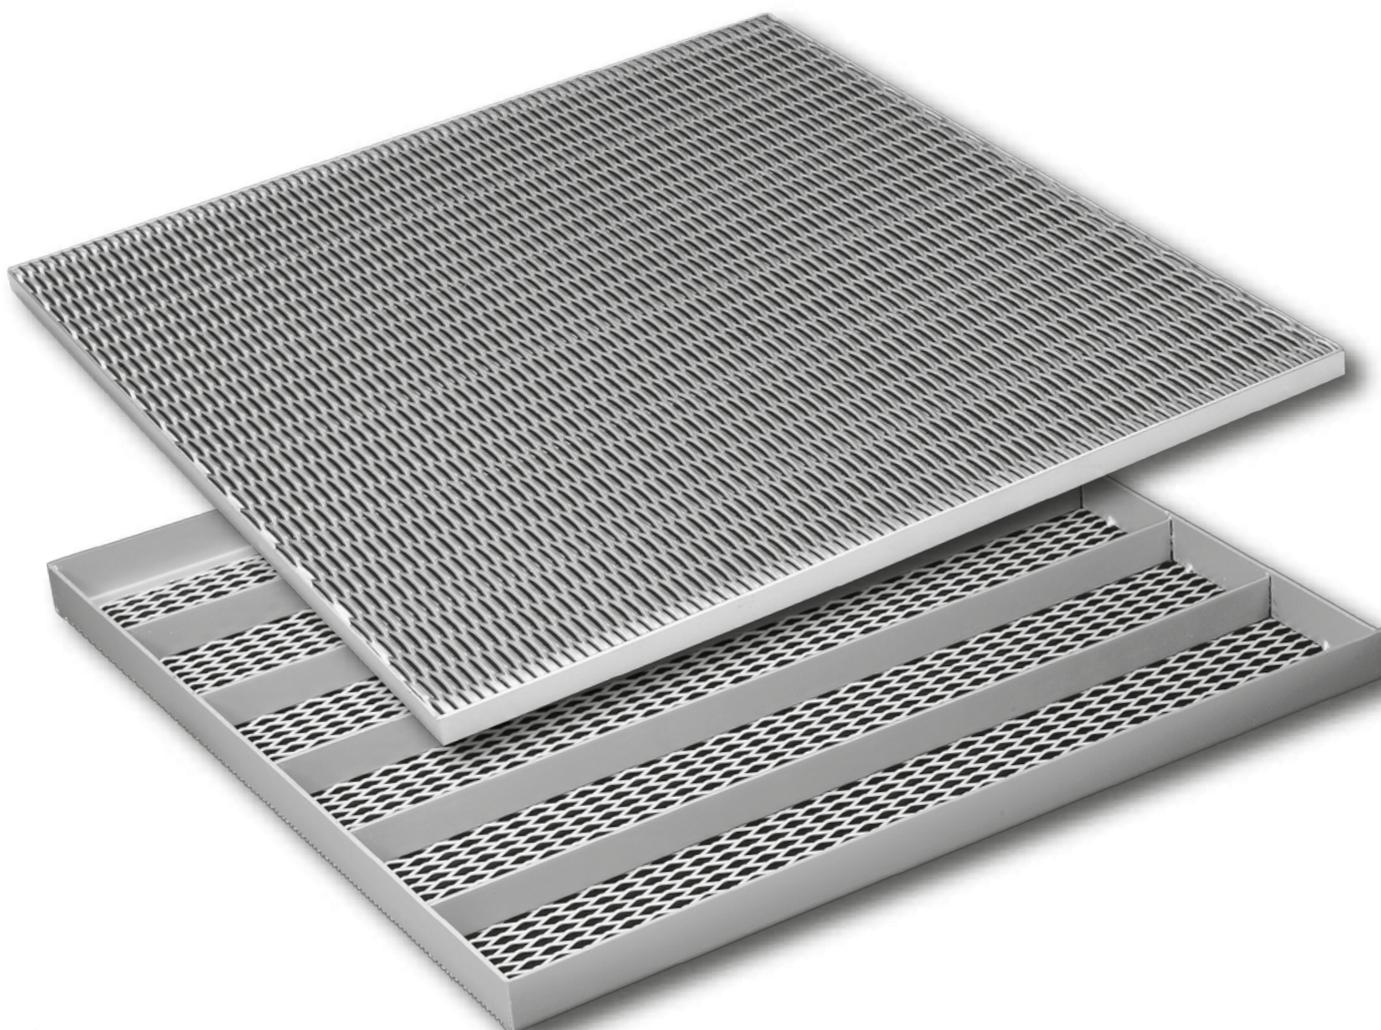

### Grilles for cellars and hollow spaces

Our grilles are made from FILS expanded metal and come with a side frame and reinforcement plates of proportionate dimensions, ready to use.

There are different possible uses, in particular:

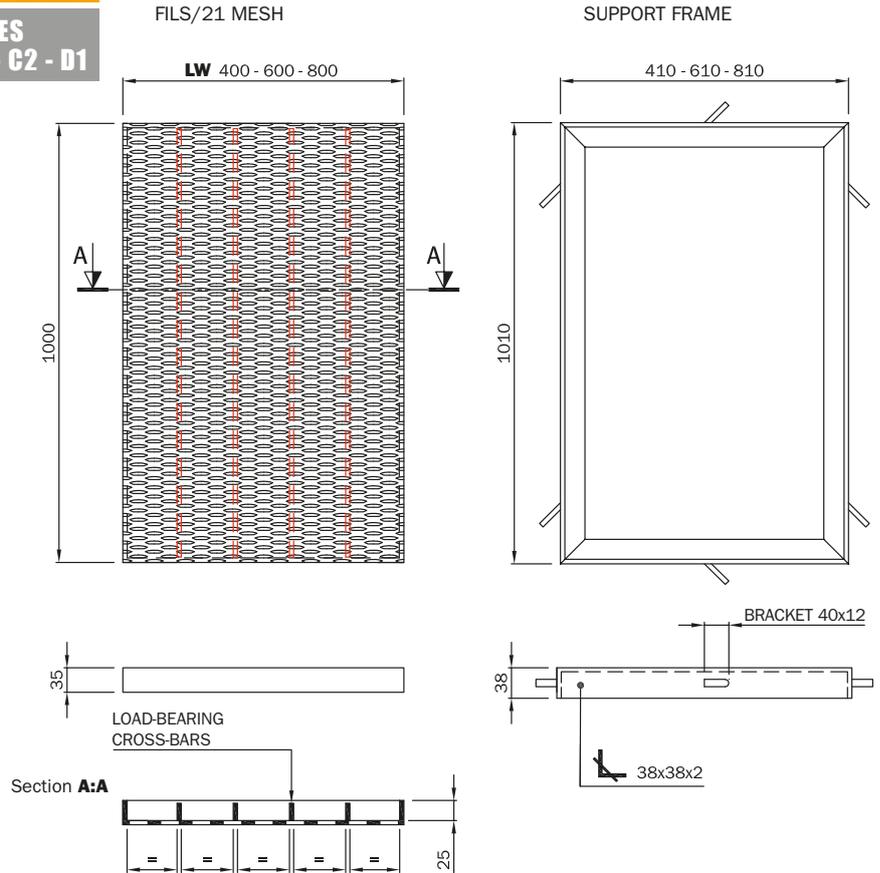

- wall cavity spaces
- inspection walkways
- civil and industrial walking surfaces
- ventilation outlets
- duct covers.

## MANHOLE COVERS - GULLY COVERS - COUNTERFRAME

Our **manhole** and **gully covers** are made from **FILS 21** expanded metal and come with a side frame and ready-to-use reinforcement plates of proportionate dimensions. **Manhole covers** can be used in various ways - they are suitable for covering manholes and for all types of ducts.

**Gully covers** are particularly suitable to cover water collection channels or shorter ventilation ducts. All manhole covers and gully covers have **PEDESTRIAN CAPACITY**. They come with various benefits like heel-safe and slip resistance.

They let dirt, debris, snow (preventing ice) and water through.

## Custom-made Fencing

Our expanded metal fencing comes in standard size or custom made.

Posts and bolts for full assembly are also supplied upon request, together with the panels.

### FINISHES

Panels and posts can be supplied raw, hot-dip and painted with a polyester powder coating for outside with colours from RAL table.

### MATERIALS

- carbon steel
- aluminium

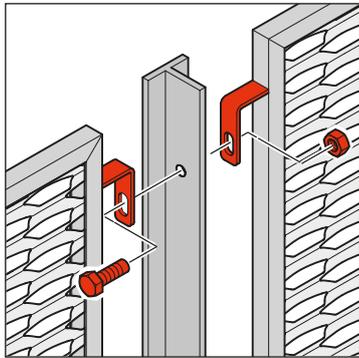

Ellisse Mesh  
Ultra Limites Range

EF 400 Mesh  
Ultra Limites Range

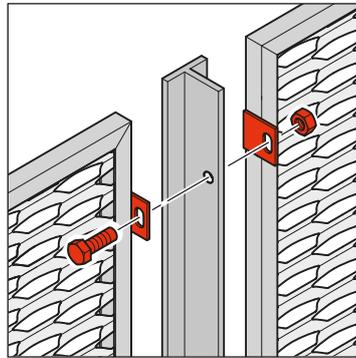

Our fencing can be fixed according to the BASE, COMPATTO and RAPIDO systems

**BASE  
FENCING SYSTEM**

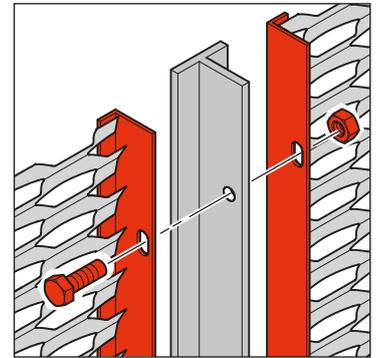

Panels framed with U profiles on all 4 sides. They come supplied with slotted **brackets** to be fastened to the posts.

**COMPATTO  
FENCING SYSTEM**

Panels framed with U profiles on all 4 sides. They come supplied with slotted **plates** to be fastened to the posts.

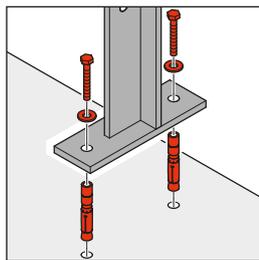

**COMPATTO  
FENCING SYSTEM**

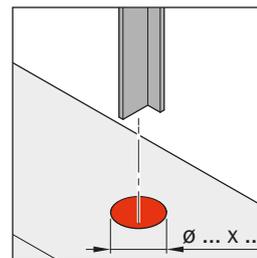

Panels unframed on 2 sides. They come supplied with slotted **L-profiles** to be fastened to the posts.

**Fastening to the base of the posts**

All fencing can be fastened to the base as described below.

Fastening to the post bases with screw anchors.

Fastening to the base by inserting the post into the pre-cut hole and filling the empty space.

**Fastening panels to posts**

**SPECIAL ANTI-THEFT BOLT**  
Bolt and nut M8 x 25 mm in AISI 304 steel

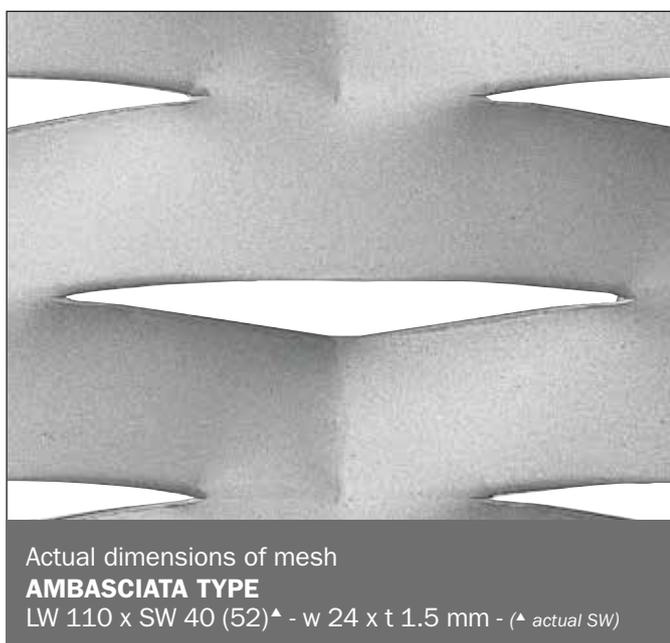

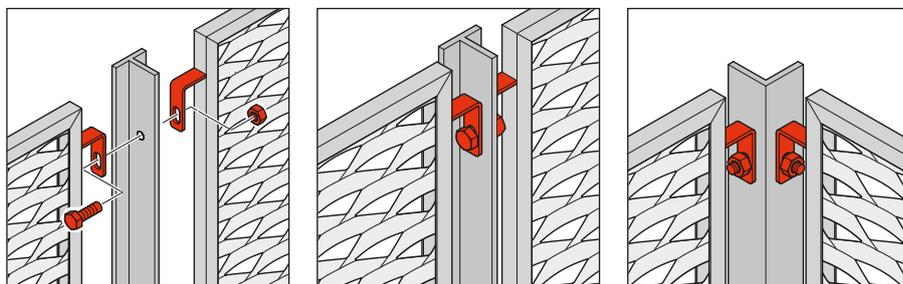

Bolt and nut M10 x 25 mm in hot-dip galvanised carbon steel or in AISI 304 steel

## AMBASCIATA Fencing BASE System

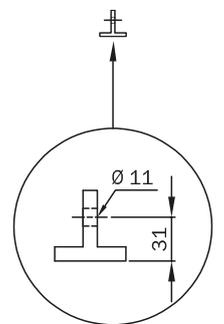

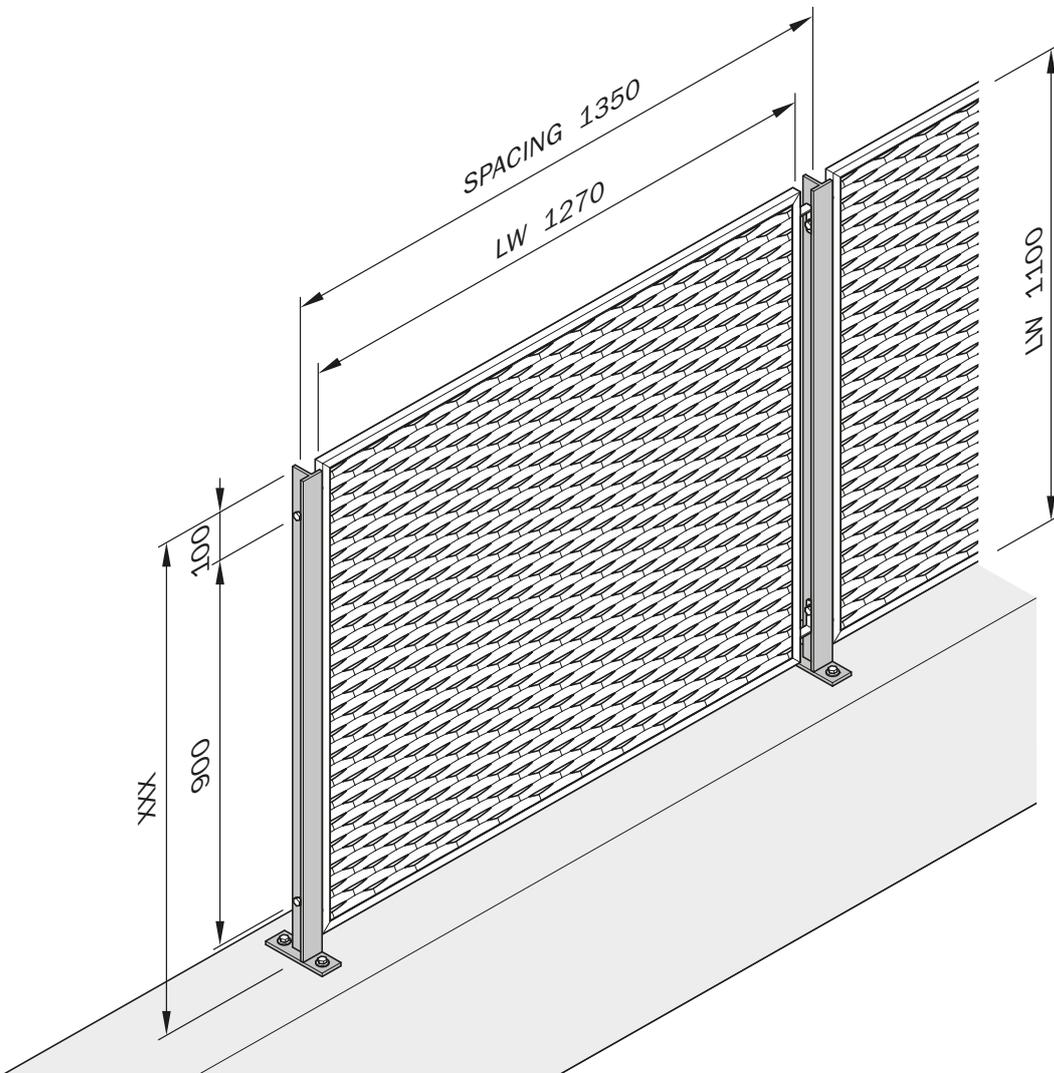

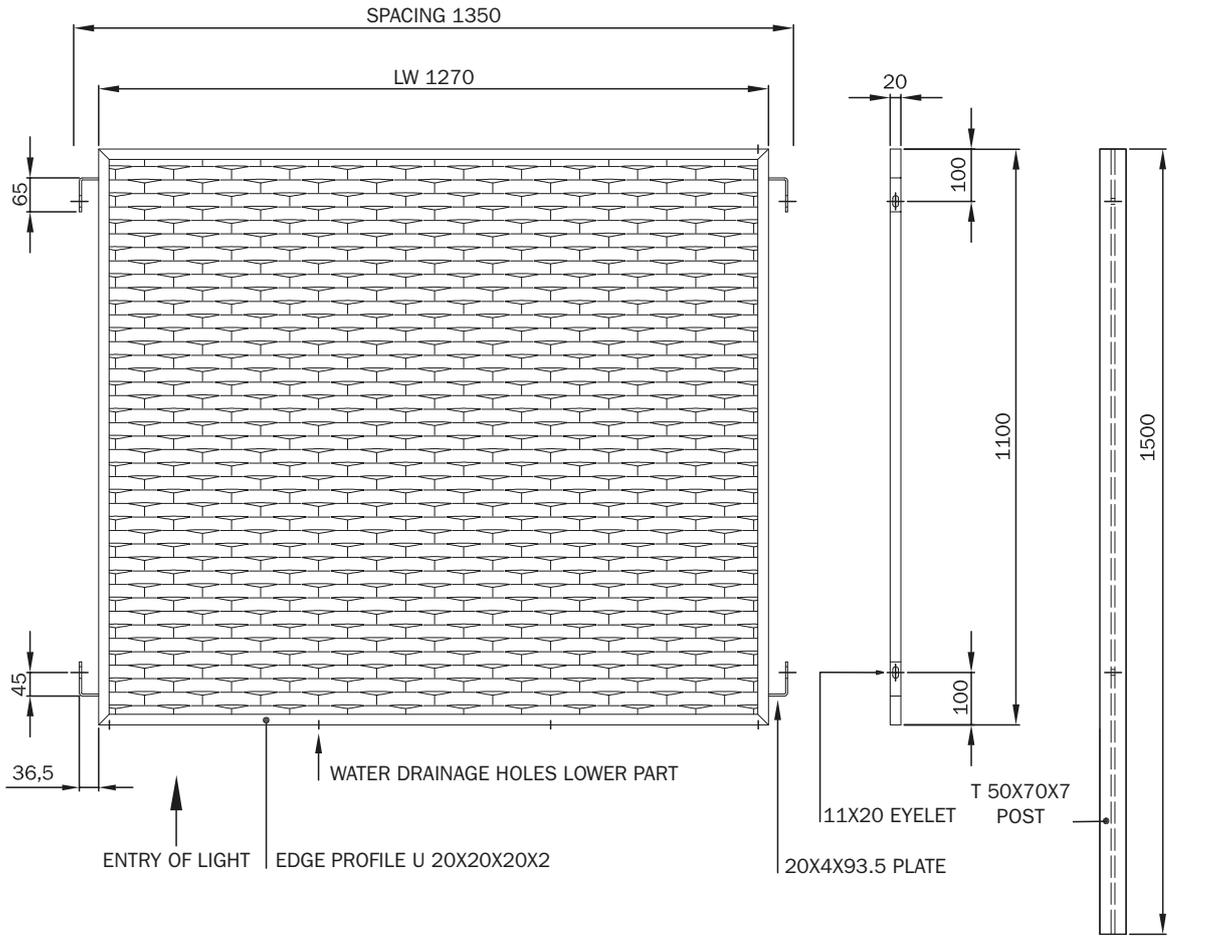

The Ambasciata mesh in the AMBASCIATA fencing BASE System ensures a see-through or hiding effect. It completely blocks the inside view from outside while ensuring good visibility of the outside from the inside.

| AMBASCIATA Panel       | mm               |
|------------------------|------------------|
| Spacing                | 1350             |

## AMASCIATA Fencing COMPATTO System

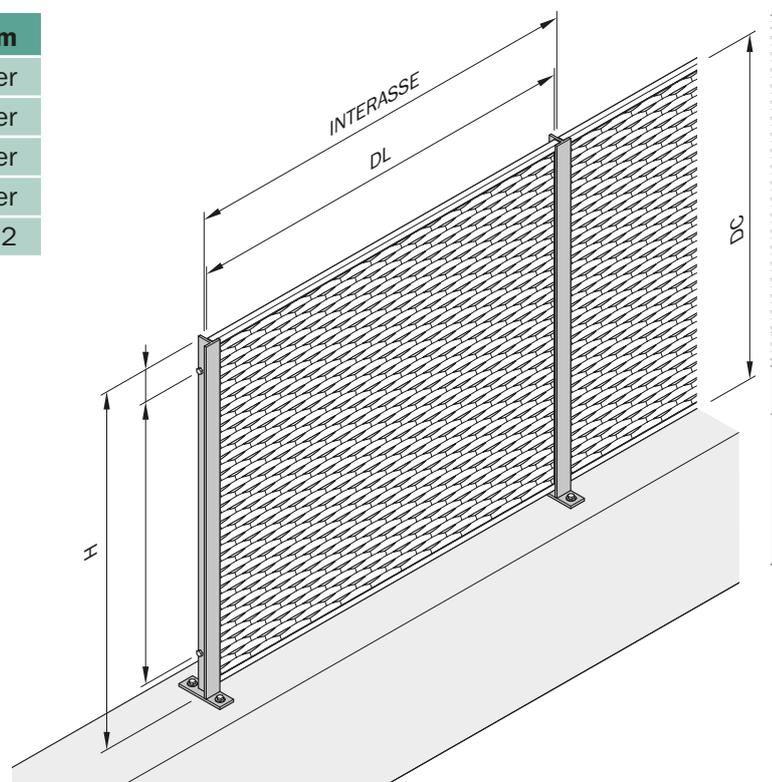

Our COMPATTO System AMBASCIATA fencing ensures complete privacy, thanks to the close fastening of the panel to the post. It still retains the inviting effect of the classic Ambasciata mesh.

| AMBASCIATA Panel      | mm                            |
|-----------------------|-------------------------------|
| Spacing               | Made to order                 |
| Panel frame <b>LW</b> | Made to order                 |
| Panel frame <b>SW</b> | Made to order                 |
| T-post section        | 50 x 50 x 7 - H Made to order |
| U-profile             | 20 x 20 x 20 x 2              |

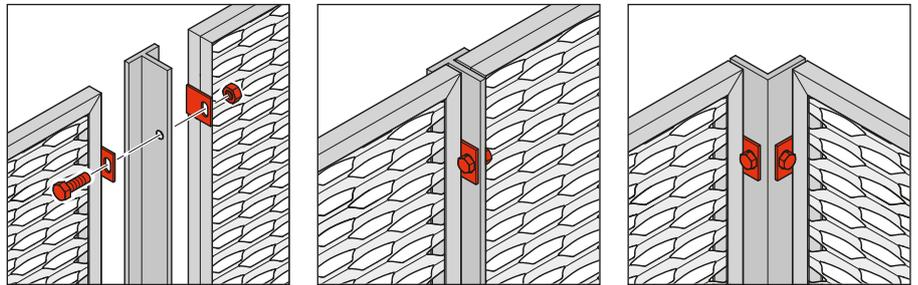

Notes on fastening to the base on page 113

# ESPERIA Fencing COMPATTO System

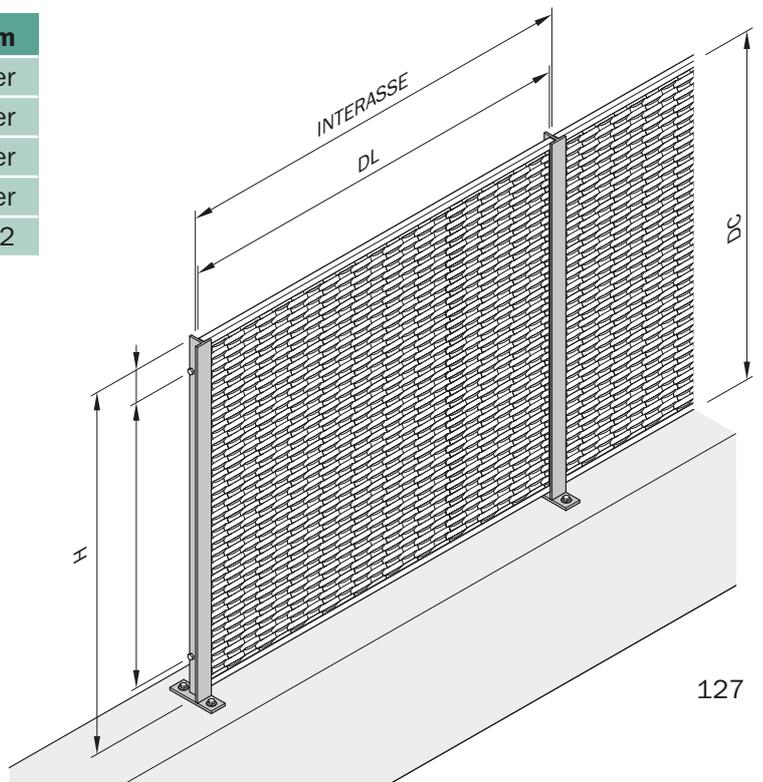

Our COMPATTO System ESPERIA fencing ensures complete privacy, thanks to the close fastening of the panel to the post. The effect of the Esperia mesh ensures an on-trend aesthetic that is becoming increasingly popular.

## “RETE SICURA NET” expanded mesh

Protective expanded mesh for moving openings and gates

**RETE**  
**Xsicura**<sup>®</sup>  
**NET**

Complies with UNI EN 12453/17

### **“Sicura Net” mesh your safety**

A responsible choice that gives peace of mind to those who are in charge of security.

**EUROPEAN  
REGULATIONS**

**Industrial, commercial doors and gates and garage  
doors - Safety in the use of power-operated doors -  
Requirements and test methods**

**UNI EN 12453**

SEPTEMBER 2017

Industrial, commercial and garage doors and gates - Safety in use of power-operated doors - Requirements and test methods

The standard specifies the safety-related requirements and testing methods for any type of power-operated door, gate or barrier to be installed in areas that are accessible and whose main intended use is to provide safe access to goods, vehicles and persons in industrial, commercial or residential buildings.

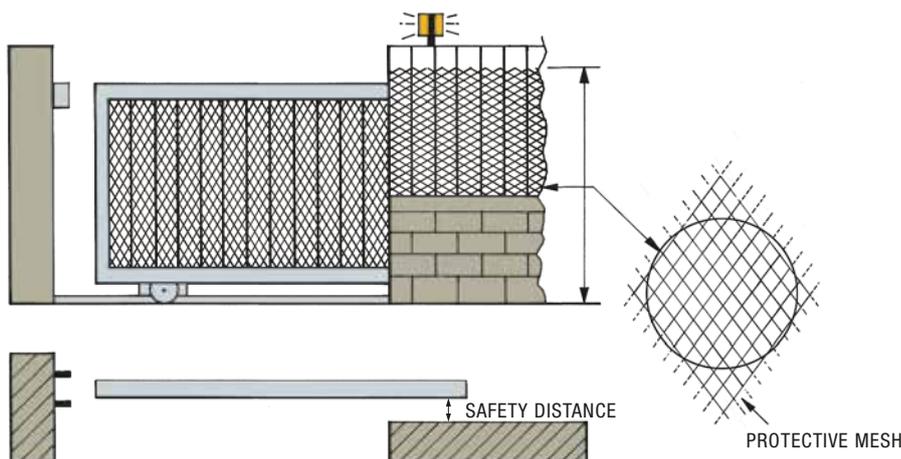

## THE FIRST SAFETY MEASURE IS BEING CORRECTLY INFORMED

The new UNI EN 12453/17 regulation prescribes that the power-operated gate and the fixed part of the track must be fitted with mesh to protect against the risk of shearing.

The new standard, in table B.1 in Appendix B, page 29, states that the minimum size of the rectangular opening of the safety mesh must be  $\leq 18.5$  mm.

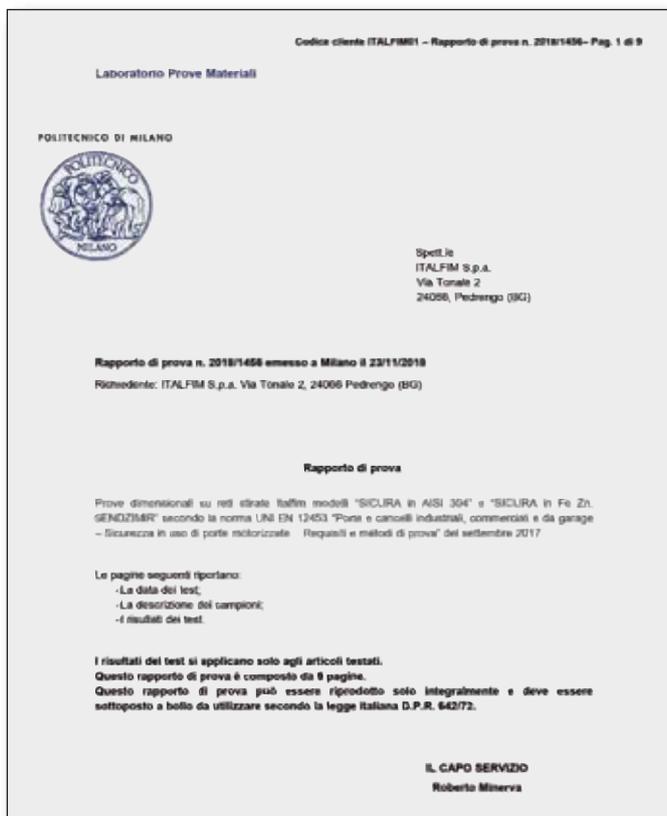

**Table B.1 - Safety distances in relation to openings in fences**

| Openings in fences (mm)<br>smallest dimensions of a rectangular opening | Safety distance (mm) |
|---|----------------------|
| $\leq 18,5$   | 120                  |
| $> 18,5 \leq 29$  | 300                  |
| $> 29 \leq 44$  | 500                  |
| $> 44 \leq 100$   | 850                  |

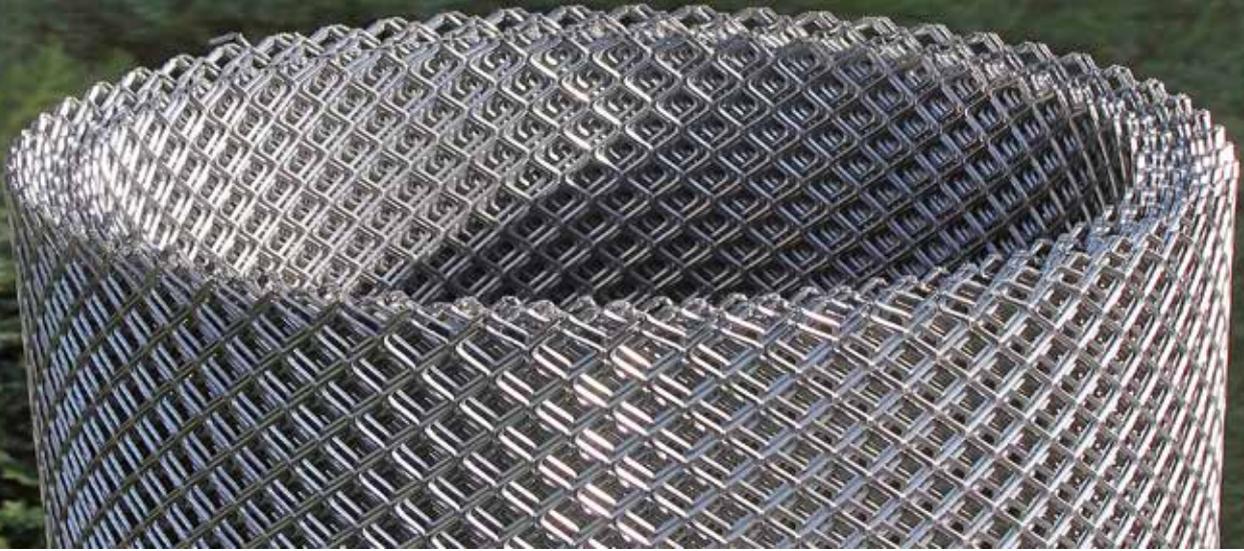

The Milan Polytechnic laboratories certify that all analyses of dimensions relating to the opening of the **Sicura Net** mesh meet the requirements of the new standard UNI EN 12453/17.

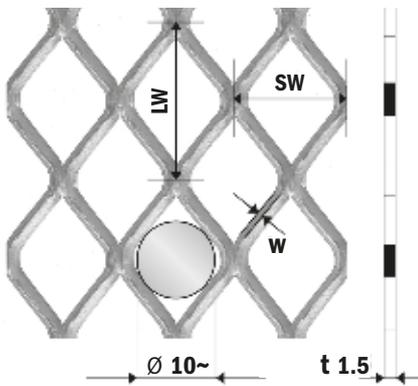

In addition, the **Sicura Net** mesh does not allow even a 10 mm simulation sphere to pass through (equivalent to the size of a finger), as certified at the time by the TÜV laboratories.

## “RETE SICURA NET” expanded mesh

### ACTUAL DIMENSIONS

TÜV technical report

### MATERIALS

Sicura Net mesh is made in AISI 304 stainless steel and in Sendzimir galvanised carbon steel.

#### AISI 304 Stainless steel

Q 20 x 13.8 mm (LW x SW)  
Material is corrosion resistant.

#### Sendzimir galvanised carbon steel

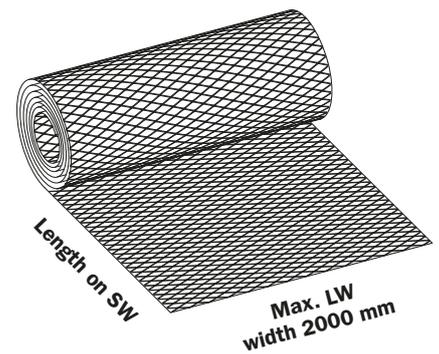

Q 20 x 13.9 mm (LW x SW)  
Material requires protective coating.

Legenda:

- LW** - Long way pitch
- SW** - Short way pitch
- w** - 1,5 mm strand width
- t** - 1,5 mm thickness
- Ø** - hole 10 mm recorded

### FORMATS

Sicura Net mesh is available in rolls with the following widths: 1000, 1250, 1500, 2000 mm

## THE SICURA NET MESH TO ENSURE PERSONAL SAFETY

**Xsicura<sup>RETE</sup><sub>NET</sub>** DOES NOT BREAK

Robust and durable, "Sicura Net" mesh does not come apart and does not warp.

**Xsicura<sup>RETE</sup><sub>NET</sub>** IS 100% ELECTRICAL

Contact with a single point of the mesh is sufficient to ground the "Sicura Net" mesh.

**Xsicura<sup>RETE</sup><sub>NET</sub>** ENSURES OPTIMAL VISION

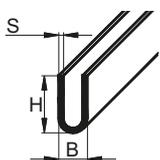

Guarantees good perspective visibility.

**Xsicura<sup>RETE</sup><sub>NET</sub>** IS LEGALLY COMPLIANT

Can also be used in accident prevention, as set out in Italian Legislative Decree No. 81/08 (formerly 626/94).

The new UNI EN 12453/17 standard requires that sharp edges be avoided. U-profiles guarantee edging that is practical and flatter.

PROTECH AND ULTRA LIMITES MESH SPECIFICATION

**IMPORTANT NOTE**  
 In order to dimension correctly the profile, it is recommendable to measure the sheet thickness along the perimeter. The final sheet thickness at the perimeter may differ from the nominal value indicated on the data sheet.

Ultra Limits Line

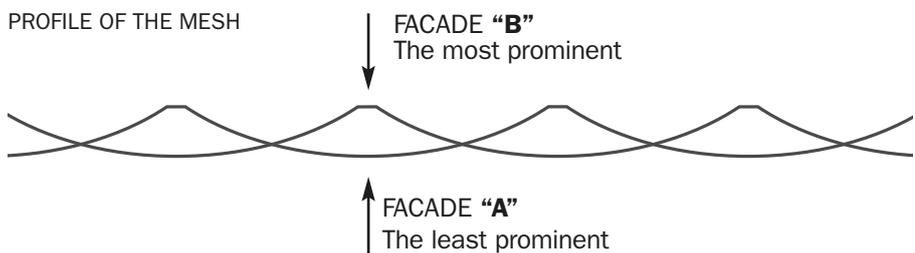

LEGEND

- LW** Long way pitch
- SWn** Short way pitch nominal
- SWa** Short way pitch actual
- w** strand width
- t** thickness

PROFILE OF THE MESH

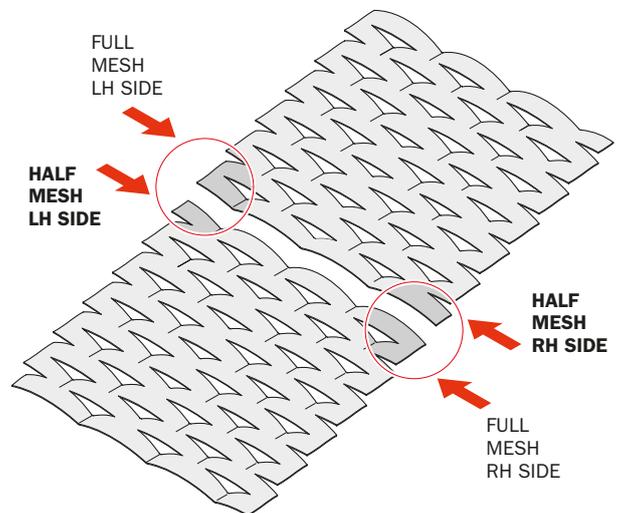

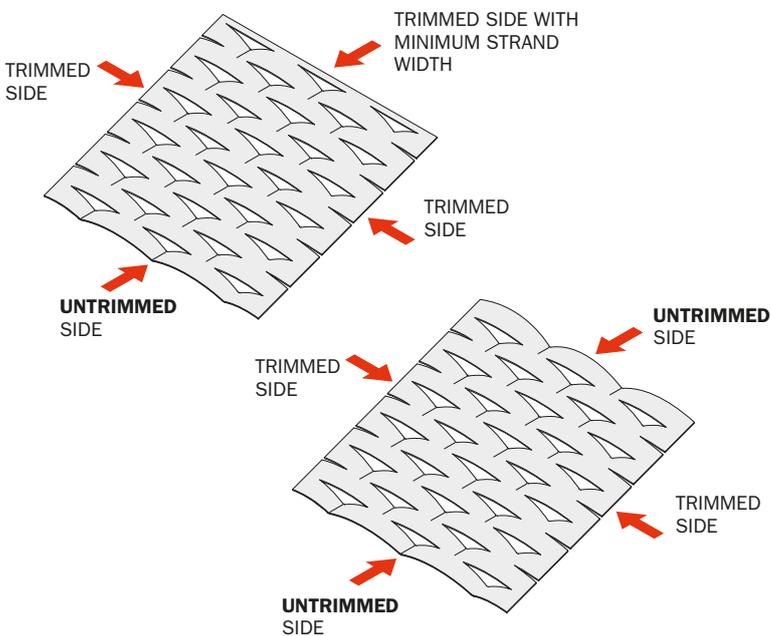

# CHARACTERISTICS FOR USE IN MODULAR SOLUTIONS

Surfaces of any shape and size can be created.  
 Expanded mesh can be cut, bent, and curved.  
 Panels are available in standard dimensions.  
 Panels built to measure are also available on request.

## FIXING SUGGESTIONS

Expanded mesh can be fixed in a number of different ways.

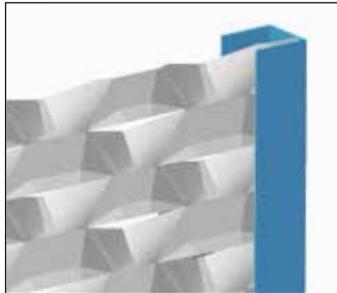

Here are a few popular examples.

Panels can be trimmed and then framed in various profiles offering a protected edge to the material and allowing the panels to sit more uniformly side by side.

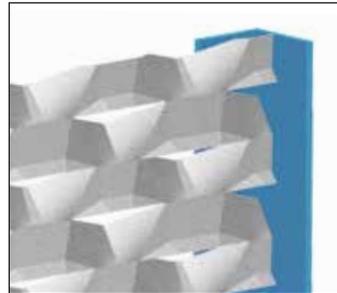

The mesh can then be fixed or welded to the substructure using various hooking systems depending on the specific design needs of your project.

The resulting modular solutions are highly flexible allowing you to decide the layout of your panels at will. Please contact us for further information.

### Framing profiles

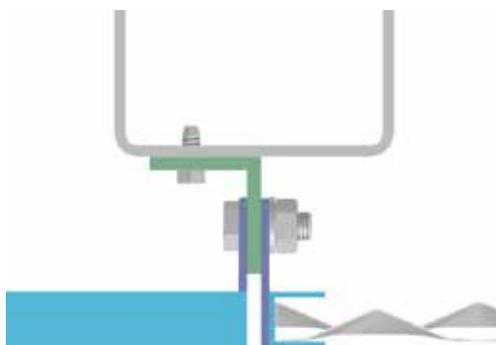

“U” section profile. Expanded mesh welded on the inside.

“L” section profile. The side of the frame is concealed.

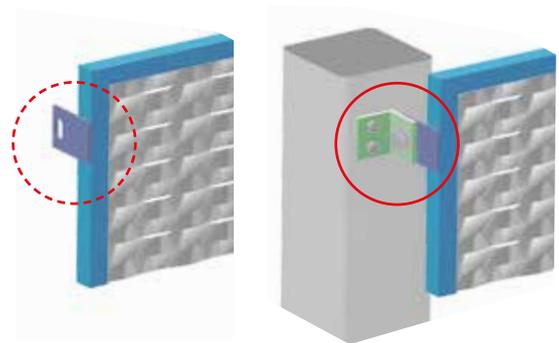

Dimensions of the framing profiles: see page 192

### Fixing system with plates

## COLOUR EFFECT

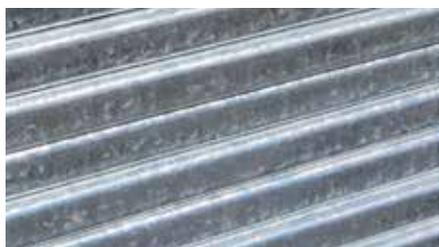

Ambasciata Mesh - Protech Line - Mars color with COR-TEN effect finish

### **Finishes guaranteed and certified against corrosion**

Constantly new visual effects for rational and creative design.

### **Hot-dip galvanizing**

Hot-dip galvanizing is a surface coating treatment for the protection of metals based on the properties of molten zinc. A recently hot-dip galvanized surface is at first bright and shiny and then takes on a matte light color over time.

### **Anodizing**

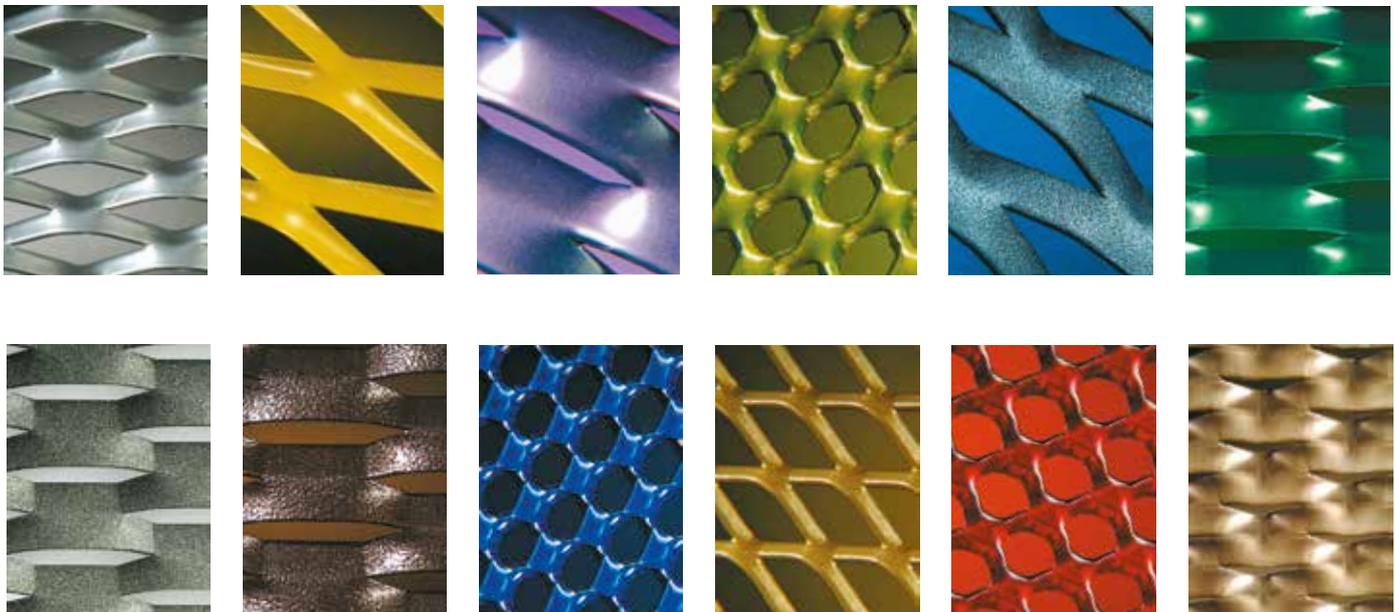

Anodizing is a chemical electric process performed in order to form a layer of oxide on the surface of articles in aluminum that provides protection against corrosion.

### **Powder coating**

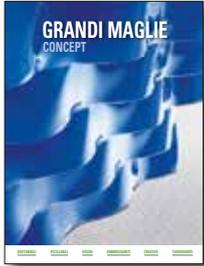

In addition to the vast range of colors that enriches the other choices made with personality, powder coating provides different types of protection against the corrosion of metals as required by their specific use. Different types of powder coating are available: epoxy resin, polyester, and epoxy-polyester coat.
